

Micropross and Aspects Announce Partnership

16 October 2008

Micropross and Aspects Tools Limited announce a partnership to deliver market leading test tools to the SWP community. In recognition of the greater specialism required to develop flexible, powerful and easy to use SWP solutions, Micropross and Aspects are combining their specialist knowledge of hardware and software design. As well as collaborating to develop market leading SWP test solution, the companies are exploring opportunities to bring their unique experiences to custom projects for their joint customer base.

Philippe Bacle, Micropross' President, said "Micropross are enjoying significant success with our SWP hardware solutions and see our partnership with Aspects lifting our solution to a new level. When we decide to look for a new software partner Aspects stood out. We expect both our customers to be happy with the results."

André Reumerman, Aspects' CEO, said "The challenges created by new smart card technologies such as SWP and USB IC require greater specialism. We knew at our first meeting with Micropross that had a found the right partner. Micropross have a fantastic range of products and I am very excited about the partnership and the solutions we are already beginning to produce together."

Together, Micropross and Aspects have over 40 years of experience in smart card hardware and software solutions. The partnership creates an unmatched knowledge base and will result in the most powerful and flexible solutions for SWP/HCI testing.

Micropross is the world's leading supplier of both contact and contactless test hardware for the smart card industry. Micropross was established in 1979 and is headquartered in Lille, France. For many years Micropross has been working closely with the main manufacturers to offer a full range of products dedicated to the smart card industry. Worldwide used, its products are designed to develop and produce faster and better.
